PRODUCT: 10K Spin Column

CATALOG #: 1997-25
QUANTITY: 25
Membrane: 10,000 MWCO PES

DESCRIPTION:
The 10K Spin Columns are disposable ultrafiltration devices for the concentration of biological samples. Maximum initial sample volume range from 600 µl to 2 ml. They can be used in either a swing bucket or fixed angle rotors accepting 2.2 ml and 15 ml centrifuge tube.

The vertical membrane design and thin channel filtration chamber minimizes membrane fouling and provides high speed concentration, even laden solutions. It is specifically designed with low internal surface and membrane area in order to achieve superior recovery from dilute solution.

Another feature of this column is the choice of directly pipetting the concentrate from the dead stop pocket built into the bottom of the concentrator, or alternatively reverse spinning the concentrate into recovery cap which can then be sealed for storage.

FOR RESEARCH USE ONLY! Not to be used in human.
