

Lab Animal Health Monitoring

Animal Disease ELISA Kits

Early and reliable detection of infections in the colony is essential to a comprehensive laboratory animal health surveillance program.

- Assure the health of your animal colonies
- Monitor undesirable infectious agents
- Detect low levels of pathogen-specific antibodies

A large number of sensitive ELISA kits for monitoring common pathogens in laboratory animals based on FELASA recommendations is offered. Multiplexing of up to nine different antigens per well can be provided as custom service.

In addition, IFA slides and PCR controls are also available.

Procedure

Load diluted sample and controls to microwells
Cover wells and incubate at 37°C for 45 min

↓ Wash

Add 100 µl conjugate to wells
Cover wells and incubate at 37°C for 45 min

↓ Wash

Add 100 µl substrate to wells
Incubate uncovered wells at RT for 30 min

↓

Read absorbance at 405nm in microplate reader

Animal Disease ELISA Kits

Ease of Use

- Standard 96-well ELISA format (strip plates)
- Ready-to-use ELISA reagents
- Easy-to-follow directions, no special training needed
- One protocol for all assays
- Compatible with automated plate processors
- Storage temperature 2-8°C
- Delivery time < 1 week

Reliability

- Highly reproducible: CV < 5%
- Detects low levels of antibody in early infection
- Ensures good laboratory animal health
- Antigen selection based on FELASA* recommendations

Cost-Effectiveness

- Significant savings vs. outside testing service
- 2.5 hours turnaround time
- Minimum 12 months shelf life
- Unused strips can be removed and used later
- Components also available separately and in bulk

Multiplexing

- Custom-made plates to fit your needs
- Up to nine different pathogens per well
- 5 µl sample per assay
- Significant reduction in labor and turnaround time
